SUMMARY

Full-stack software engineer independently building fitness and nutrition products with React, JavaScript, Node.js, Express.js, MongoDB, and AWS. Own product decisions, interface design, and React Native implementation for CalorieBank. Use AI-assisted development for investigation, research, architecture exploration, implementation, debugging, and documentation; apply human judgment to problem definition, architecture decisions, and tradeoffs, with responsibility for testing, validation, and final verification.

TECHNICAL SKILLS

Frontend and mobile: React, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, TypeScript, React Native, Expo

Backend: Node.js, Express.js, REST APIs, JWT authentication, MongoDB, Mongoose

Cloud and infrastructure: AWS, Amazon EC2, Amazon S3, AWS Lambda, AWS Glue, IAM, VPC, Elastic Load Balancing, Auto Scaling, CloudWatch, Amazon SNS, MongoDB Atlas

Deployment and tools: Git, GitHub, Vercel, Render, Postman

Practices: Product discovery, component architecture, accessibility, performance optimization

SELECTED NUTRITION PRODUCTS AND DESIGN PROTOTYPES

CalorieBank

[Mobile Preview](#) | [GitHub](#) | [Earlier Web Prototype](#) | [Earlier Walkthrough](#)

- Independently building flexible calorie planning across days, with a public web prototype and iOS and Android builds privately distributed through TestFlight and Google Play Internal Testing.
- Own product decisions and full-stack engineering with React Native, Expo, and Express; built Android Health Connect intake, account-aware push notifications, cross-platform provider switching, account-safe refresh, and a device-tested Kotlin keyboard-geometry module; validated warm-cache offline behavior.
- Designed and implemented a bank-first mobile dashboard, with tappable summaries revealing source explanations and step-planning tools while keeping detailed calculations off the main screen.
- Implemented accessible labels and scalable layouts; validated iPhone VoiceOver and maximum text size, plus keyboard-open form usability on physical iOS and Android builds.

Walmart Nutrition Discovery

Independent exploratory frontend and product-design prototype | [Walkthrough](#)

- Built four HTML, CSS, and JavaScript walkthroughs exploring grocery-results layout and calorie, protein, and fiber discovery, using nine source-grounded product examples.
- Implemented editable per-serving thresholds, optional combined calorie goals, input validation, and empty-result recovery; kept labeled servings beside nutrition facts.

Amazon Nutrition Discovery

Independent exploratory frontend and product-design prototype | [Walkthrough](#)

- Built HTML, CSS, and JavaScript walkthroughs for popcorn, protein bars, and fiber bars, with editable per-serving goals and compact product rows that update in place.
- Kept labeled servings and dated rating snapshots beside nutrition facts for four source-grounded examples per scenario; added comparisons and input validation, with phone and desktop layouts checked.

Whole Foods Nutrition Discovery

Independent exploratory frontend and product-design prototype | [Walkthrough](#)

- Built HTML, CSS, and JavaScript walkthroughs for popcorn, yogurt, and cereal using authentic matching BEFORE references and four source-grounded examples per scenario.
- Placed editable per-serving controls above the product grid so applying a goal updates results on the same screen; retained label-source notes, two-product comparison, and responsive two-column phone and four-column desktop layouts.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate | Amazon Web Services

IBM Front-End Developer Professional Certificate | IBM

EDUCATION

Computer Science Coursework | University of Houston

Dean's List (Multiple Semesters)
